

Question 2

- Chess

① Players: The players on Chess can be both multiplayer or single players

so Player vs Player
Single player vs Game

② Objectives: Checkmate my opponent's king which is CAPTURE

③ Rules:

Pawn: Moves forward 1 square (or 2 squares from its starting position) and captures diagonally

Rook: Moves any number of squares vertically or horizontally

Knight: Moves in an "L" shape (2 squares in direction, then 1 to the side). Can jump over pieces

Bishop: Moves any number of squares diagonally

Queen: Moves any direction, any distance

King: Moves 1 square in any direction

④ Outcomes: - Capture by opponents king
- A draw or tie due to no legal moves for the opponent

⑤ Procedure: when playing Multiplayer

- This includes the initial setup of the board with pieces in their standardized positions
- First player to move is the white player and then players take alternate turns
- In each player's turn, each player must move one piece according to its legal movement rules
- A player's turn may result in capture, special actions like castling or pawn promotion

⑥ Resource: the resources in chess are the pieces themselves each with unique capabilities and values, as well as the squares on the board which represent a position to allow damage. Some games may include a timer

⑦ Conflict in Chess

Obstacles

- The rules limit movement
- Pieces block each other's paths

Opponents

- The other player is the main obstacle trying to

Checkmate

Dilemmas

- Attacking vs defending
- Choosing between multiple strong moves

⑧ Boundaries: These are defined by the physical or virtual 8x8 Chessboard which constrains movement to within its square.
